                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         atches
The peptide is modified at the N-terminal with a lauryl, palmitoy: or esp. an octanoyl gp. The Leu at position 7 may be absent. The C-terminal (Leu or His) is amidated. The peptides and derived salts can be used to treat small cell lung carcinoma, prostatic carcinoma, tumour tissue growth, peptide ulcers, cancer and associated conditions, and to effect antagonism of bombesin/gastrin releasing peptide. Dosage is 0.2-250 mg/kg daily in 1-4 doses, at
                                                                                                            Claim 7; Page 12; 14pp; English.
                                                                                                                                     New peptide bombesin-GRP antagonists - used as antitumour agents to treat e.g. leukaemia, small cell lung and prostatic carcinoma and to inhibit gastric acid secretion.

                               The peptides in this example are bombesin analogues. The peptides were tested in a competitive binding assay and a Phosphatidyl Inosit.. (PI)-turnover assay in mouse pancreas. None of the peptides demonstrated agonist activity but all inhibited PI-turnover (c.f. stimulation produced by 100nM GRP). Analogues of bombesin are potentially useful for growth therapy and the treatment of disestive disorders, e.g. for stimulating digestion, stimulating growth of tissue in the lung, pancreas and intestine, stimulating NK cell activity against tumour cells and stimulating growth of tumours to

                                                                                            The present sequence represents a bombesin/gastrin releasing peptide type inhibitor peptide. The peptide may be used as an antimitotic and antisecretory peptide. It can control growth of small cell lung and prostatic carcinomas, and it can also inhibit gastric secretions which are causative and symptomatic of peptic ulcers. Administration may be oral but is preferably subcutaneous, intravenous, intravenous or intraperitoneal, by depot injection, by implant preparation or by application to the mucous membranes (e.g. of the nose or bronchial

The C-terminal amino acid (Met) of the naturally occurring peptide has been converted to an amide and phe 8 has been replaced by beta-Leu. Gly 6 has also been replaced by D-Ala. The peptide is useful for treating benign or malignant tissue proliferation, artherosclerosis, gastrointestinal disorders and diabetes. They act as competitive inhibitors of natural peptides, since they bind to the cell receptors but have no biological
                                     diabetes.

                                                                                                                                                                                                                Hepatoma; liver cancer;
                                                                                                                                                                                                                                                                    Bombesin analogue (5)
                                                                                                                                                                                                                                                                                                                             16-APR-1993
                                                                                                                                                                                                                                                                                                                                                                                                                                    AAR29155 standard; peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   These peptides are specifically claimed examples of a generic formula. The C-terminal amino acid (Met) of the naturally occurring peptide has been converted to a methylester. The peptide is useful for treating benign or malignant tissue proliferation, artherosclerosis, gastrointestinal disorders and diabetes. They act as competitive inhibitors of natural peptides, since they bind to the cell receptors but have no biological
                                                                             Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                    AAR29155;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New linear peptide analogues of bombesin - modified to eliminate biological activity while retaining receptor affinity, for treating cancer, diabetes, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    See also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The analogue may also be of a naturally occurring peptide terminating at the C-terminus with a Met residue, such as the 10 amino acid C-terminal region of mammalian GRP or amphibian behavior
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 20+21; Page 54; 58pp; English

                                                                                                                                                                   This is a peptide analogue of mammalian gastrin releasing peptide (GRP), neuromedin-B or -C, amphibian bombesin and litorin. It is an agonist of these cpds. and is used to treat smooth muscre proliferation and cancer of the prostate, breast or lung. Residue 6 (Ala) is D-alanine. See also AAR11519-21 and AAR11523-30.

                                                                                                                                                                                              The C-terminal residue is amidated. This peptide is one of 27 specific examples of a highly generic formula. The peptides are all analogues of either literin; the 10 amino acid C-terminal region of mammalian GRP, neuromedin B or neuromedin C; or the 10 amino acid C-terminal region of amphibian bombesin. They act as at least partial agonists of the natural peptides. The peptide analogues are made by standard methods of synthesis and can be cyclised.

This peptide is one of 27 specific examples of a highly generic formula. The peptides a: analogues of either litorin; the 10 amino acid C-terminal revy. ... mammalian GRP, neuromedin B or neuromedin C; or the 10 amino acid C-terminal region of amphibian bombesin. They act as at least position agonists of the natural peptides. The peptide analogues are mail by standard methods of synthesis and can be cyclised.

                                                                                                                                                                                                               The C-terminal residue is amidated. This peptide is one of 27 specific examples of a highly generic formula. The peptides are all analogues of either litorin; the 10 amino acid C-terminal region of mammalian GRP, neuromedin B or neuromedin C; or the 10 amino acid C-terminal region of amphibian bombesin. They act as at least partial agonists of the natural peptides. The peptide analogues are made by standard methods of synthesis and can be cyclised.
                                                                                                                                                                                                                                                                                                                                                                            Peptide agonists of litorin, gastrin releasing peptide - neuromedin B or C or bombesin, for treating cancer, preventing smooth muscle proliferation and suppressing appetite and alcohol
